Education

Centro Universitario de Ciencias Exactas e Ingenierías - UDG   Guadalajara, Jal
Ingeniería informática   2020 - 2025
Microsoft launchX course
LaunchX LATAM for fullstack development   2022

Experience

ITRANS   Guadalajara, Jal.
Fullstack web developer   Jan 2024 – Jun 2024
Working with *Laravel* php, *Tailwind* css and *Alpine.js*, I spent six months providing support to existing systems and developing new features.
Teamwork was a very essential in this workspace, I successfully followed and helped create the project dashboard using *SCRUMBAN* methodology

Activities

Online wedding invitation webapp
Frontend web developer   March 2024
Using a cutsom *Nginx* server, I deployed for a private client a modified version of dewanakl's online wedding invitation, the invitation was fully accesible on the web until after the wedding day.
Full project here

ENTT
Project manager and fullstack developer   Apr 2024 – Present
Currently I'm working with a three people team to develop and deploy a webapp for a private client, using *Django* as backend and *HTMX* to replace *Javascript* in the frontend.
My work in the managing side is holding constant meetings with the client to update them in the project state, and planning and guiding in new features development, using *SCRUMBAN* methodology and *Git* as version control.
My main responsibilities as a developer are integrating newly developed components to the system, write tests for existing components, and configure the oracle cloud server and all the production side.
